Face Hung Fin
Innovative face hung modular balustrade system

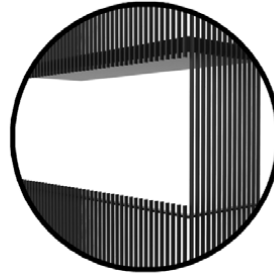

Spectrum Face Hung Fin

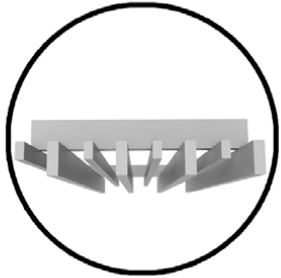

Clearspan Fin balustrade is a modular aluminium balustrade system using the popular clearspan post/fixing details. The fins attach to the face of the structural frame providing a clean, seamless look. The system replicates the look of timber or steel balustrades, with the advantages of an aluminium system.

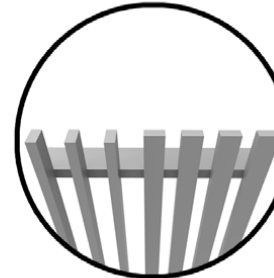

- Fin spacing can be varied depending on the level of privacy desired.
Max 100mm gap

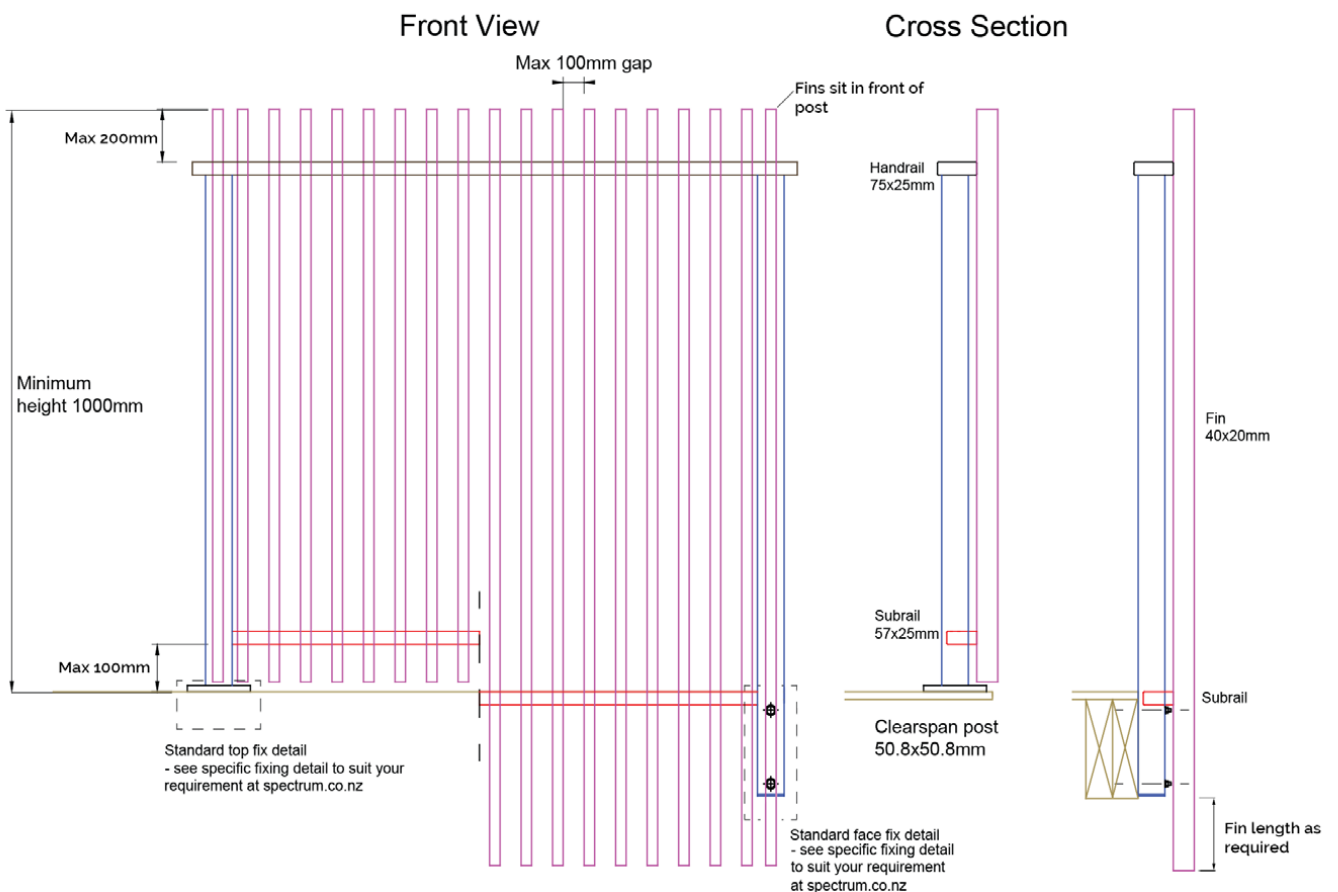

- Vertical fins can continue up to form a privacy screen.

- Standard fin size is 40x20.
- Different fin sizes (eg. 50x25 or 40x40) can be used and other materials such as perforated sheet or timber slats can be used.

- Fins can be attached to the rails on edge or flat to create a different look.

Surface Finish

All standard and non standard powder coating colours and anodizing colours are available.
